

Care Guide for your Hot Tub

- To help maintain the manufacturer's warranty a water test must be performed by Pool & Spa Depot at least once a month. If issues arise with water chemistry, a follow up sample will be needed to ensure water is in proper range for any possible warranty to be valid.
- The following normal maintenance must be performed on your hot tub:
 - ★ Test water chemistry weekly and adjust accordingly. Leave the cover off the spa for 15 minutes after addition of chlorine sanitizer.
 - ★ Spray clean spa filters at least once a month. Chemically clean every three months. Change filters every year and half.
 - ★ Check that all valves and union nuts are tight in the equipment area.
 - ★ Change pump shaft seal as needed.
 - ★ Change the sanitation bulb or system when it expires.
 - ★ Pillows will last longer if you take them out of the tub while not in use. There is no warranty on pillows.
 - ★ Clean underside of spa cover periodically. Typical lifespan is typically 5 years.
 - ★ Tighten or adjust spa cover lifter periodically.
